About Me

I am the Data Team Lead at SynthLabs, where we focus on research for post-training large foundation models. I received my Ph.D from the Computer Science Department at the University of California, Santa Barbara, while I was a member of the NLP Group, co-advised by William Yang Wang and Xifeng Yan.

The primary research focus of my research has been applying ML methods to NLP to improve data quality and model performance. In my research I have explored the use of methods including multi-armed bandits, data selection, multitask learning, transfer learning, reinforcement learning, and neuro-symbolic methods. Additionally, I have a wide array of interests in other topics including model efficiency, logic and reasoning, conversational AI, information retrieval, and multilingual models.

In the future, I am most interested in 2 main directions of work. First, I would like to continue my pursuit of data-centric research by understanding models from a data perspective, developing methods that improve data quality, and improving data efficiency. I am also very excited to apply my data-centric background to many areas of ML research, including model pretraining, alignment, fine-tuning, tool use, and neuro-symbolic systems.
